

WE MAKE SCHOOLS SAFER

YOUR CAMPUS SAFETY SOLUTION

After so many tragic events in educational facilities that has taken the lives of students, staff and first responders, safety is definitely a priority for the educational sector. Authorities, principals, teachers, parents and public safety agencies are focusing, more than ever, in developing proactive systems to address incidents of all types and prevent, protect and mitigate any kind of emergency situation.

Is your school prepared to support first responders save lives?

Fiplex can help **enhance any communications network** by designing innovative, customized, end-to-end solutions, reliable and secure that meet any authority's regulation and help first responders save lives.

COVERAGE EXPANSION FOR RELIABLE COMMUNICATIONS

Once an emergency has already happened, it is an optimum RF two way radio communication between first responders inside the facility and those outside what makes the difference. At the response staging of an emergency event, communications cannot fail. Perfect radio coverage must be available not only in general structure areas like living areas, basements, parking garages, but mostly in all critical areas like mechanical and utility rooms, public bathrooms, stairwells, exit stairs, exit passageways, fire pump rooms and elevator lobbies.

Fiplex provides public safety authorities and first responders with the coverage they need in schools or university campuses through a complete range of BDAs, Public Safety Bi-directional Amplifiers, and DAS systems in the 700 MHz, 800 MHz, VHF and UHF bands.
