

# WE MAKE BUILDINGS SAFER

## YOUR IN-BUILDING SOLUTION

One of the biggest challenges in the world of communications is to keep mission-critical first responders connected, at all times and in all places. In an emergency situation, whether an underground parking lot, in a room built of solid and concrete material, in the darkness of a stairwell or inside an elevator, it is of vital importance to ensure clear and continuous reception and transmission of RF signals to first responders who risk their lives to save others.

Fiplex can help **enhance any communications network** by designing innovative, customized, end-to-end solutions, reliable and secure that meet any authority's regulation and help first responders save lives.

# RELIABLE COMMUNICATIONS AT ALL TIMES, IN ALL PLACES

More and more jurisdictions and local authorities are demanding to certify that radio calls from an external base station or portable radio are clearly received inside a building before providing owners and managers with a certificate of occupancy.

Fiplex Communications is committed to the manufacturing of a complete range of bi-directional amplifiers and DAS systems to solve any coverage problem within buildings including 800 MHz, 700 MHz, FirstNet Ready, UHF, and VHF bands.
